Introduction

The U.S Department of Housing and Urban Development (HUD) funds local homeless assistance and prevention networks called Continuums of Care (CoC). In addition to organizing, delivering and reporting on housing and services for people who are experiencing homelessness, CoCs are required to complete a one-night point in time count of homeless persons during the last ten days in January. Idaho is divided into two CoCs; Boise City Ada County (Region Seven) and Balance of State (regions One through Six).

Idaho's 11th annual Point-In-Time (PIT) count was conducted on January 28, 2015 by Idaho's two CoCs and Idaho Housing and Finance Association (IHFA). The data from this count helps determine the amount of funding awarded for homeless programs across the state, as well as report changes among the homeless population and raise public awareness of homelessness. Data from the one-night PIT count and the longitudinal data collected by the Homeless Management Information System (HMIS) are the primary sources used to measure the progress in meeting the national strategic goal of preventing and ending homelessness.

Opening Doors, Federal Strategic Plan to Prevent and End Homelessness

In 2010 the United States Interagency Council on Homelessness released *Opening Doors, Federal Strategic Plan to Prevent and End Homelessness.* The Plan is the nation's first comprehensive strategy to prevent and end homelessness. It outlines an interagency collaboration that aligns mainstream housing, health, education and human services to prevent Americans from experiencing homelessness in the future. Opening Doors is focused on four key goals; 1) End chronic homelessness by 2016; (2) Prevent and end Veterans homelessness by 2016; (3) Prevent and end homelessness for families, youth, and children by 2020; (4) Set a path to end all types of homelessness. Data from the PIT Count can be used as one measure to see if the CoCs are on track to meet these goals.

Understanding the Point-In-Time Count

Goal

The primary goal of the PIT count is to provide a one-night "snapshot" of the number of homeless persons who are either living on the streets, in places not meant for habitation, or are currently residing in emergency shelters or homeless transitional housing projects. Additionally the PIT Count collects demographic and subpopulation information to better understand the situations and extent of homelessness in our state.

PIT Definition of Homelessness

Using HUD's definition of homelessness for the PIT count, CoCs are instructed to count all adults, children in households, and unaccompanied youth who, on the night of the count, reside in one of the places described below:

- An unsheltered homeless person resides in a place not meant for human habitation, a vehicle or on the streets. Included in this count are people in temporary tents, encampments, and warming centers.
- A sheltered homeless person resides in an emergency shelter, transitional housing or supportive housing for homeless persons who originally came for the streets or emergency shelters

PIT Data Collection Methods

The state is divided into seven regions within the two CoCs: Regions One through Six are in the Balance of State CoC and Region Seven is in the Boise City/Ada County CoC (map page 17). The PIT count consists of two methods to collect data. The sheltered data is collected, in aggregate, from surveys completed by homeless service providers and from the HMIS database. The unsheltered data is collected from surveys administered directly to

individuals. This annual enumeration reports on the exact number of persons counted and is not based on prior reports or estimates of how many homeless persons there may be based on opinion.

Sheltered Count surveys for all regions are coordinated through IHFA. Surveys are sent to over 50 agencies operating more than 100 different projects that provide shelter and housing to men, women and children on the night of the count. All surveys, both sheltered and unsheltered are sent to IHFA for data validation and compilation to produce the final statewide report.

The unsheltered count utilizes a PIT Committee with representation from Regions One through Six and the Boise City/Ada County CoC for Region Seven. Each committee member is responsible for working with their CoC, regional housing coalitions, local PIT committees, regional homeless service providers and other organizations to conduct the count. All unsheltered survey are sent to IHFA for review and surveys that meet the criteria for homeless or precariously housed are entered into HMIS for deduplication and reporting.

The Unsheltered Count uses an interview component for all persons contacted in order to get an unduplicated count and collect basic demographics. Activities that IHFA, CoCs, regional PIT Committees, or housing coalitions perform include:

- Leading the sub-committee or the group planning the count in their region
- Recruiting and training volunteers and agency staff to conduct the count
- Contacting other community and faith-based organizations, community leaders, business and media outlets that may help with the count or provide volunteers
- Identifying "known locations" and service-based programs that non-sheltered homeless persons frequent or stay
- Planning events centered around bringing the unsheltered homeless to a central location

The seven regions consist of the following counties:

Region One	Benewah, Bonner, Boundary, Kootenai, Shoshone
Region Two	Clearwater, Idaho, Latah, Lewis, Nez Perce
Region Three	Adams, Boise, Canyon, Elmore, Gem, Owyhee, Payette, Valley, Washington
Region Four	Blaine, Camas, Cassia, Gooding, Jerome, Lincoln, Minidoka, Twin Falls
Region Five	Bannock, Bear Lake, Bingham, Caribou, Franklin, Oneida, Power
Region Six	Bonneville, Butte, Clark, Custer, Fremont, Jefferson, Lemhi, Madison, Teton
Region Seven	Ada

Reviewing the Data

The sheltered and unsheltered survey forms collect up to 16 data variables that can change year to year to reflect the type of data required by HUD or requested by the CoCs. Some questions are asked only of individuals and the head of households, while others are collected on all persons. The tables in the report will indicate which grouping the data represents. Not all respondents answered every question on the survey and blank responses are not reported unless specifically noted. Totals, percentages and graphs are based on the answered questions only and do not represent null or missing values.

PIT Uses and Limitations

Due to the nature of a one-night count the uses of the PIT Count data and its limitations should be noted. It is understood that a one-night point in time count has limitations and in any given year may under-count or over-count the homeless population when compared to data collected over a longer period of time or at other periodic intervals. The CoCs understand these limitations but still find value in the data, as what is deemed most important is the quality and accuracy of the count as opposed to merely the size of the count.

The PIT Count is one tool that can be used for effective planning and provision of homeless assistance services. Communities need to understand the size and characteristics of their entire homeless population, not just those who

already access shelter and services, and the PIT Count is the only time that an unduplicated count of both the unsheltered and sheltered homeless is conducted at the same time.

This count covers the whole state and an increase or decrease in the count does not necessarily reflect the situation in all areas of the state. To determine which regions are specifically reporting increases or decreases please refer to the tables at the end of this report. The data contained in this report should not be used for annual extrapolation or for an exact count, but rather as a gauge of the number of persons experiencing homeless in Idaho on a given night.

Increases and Decreases in the Count

Decreases or increases in the number of persons counted from year to year may indicate either a change in the homeless population or external circumstances or both. Conditions that affect the count include; homeless persons not accessing shelter or services during the count; volunteers experience difficulty finding those who are living on the street who agree to be surveyed, weather or natural disasters; community events; and new or closed projects. Therefore, it is important when using PIT data to follow-up and gather additional information, along with other types of data, to get a clear picture of homelessness in Idaho.

While the 2015 PIT Count as a whole decreased 6.5% from last year, the shelter population saw an increase and the unsheltered homeless decreased. With most housing programs operating at or near capacity year after year statewide decreases or increases may fail to reflect the true nature of homelessness across the state. This year's count shows a 17% decrease in unsheltered homeless and a 2% increase in the sheltered population but for the second year in a row people experiencing homelessness for the "first time" stayed above 20% (23% in 2014 and 22% in 2015). This shows even as programs are able to move more people into stable housing there are still a high number of newly homeless people needing help.

Across the state the unsheltered population count increased in some regions while it decreased in others. Possible explanations for this have been noted below.

- Region One: Experienced a 33% decrease in the number of unsheltered counted due to a number of volunteer agencies not being able to participate in the count as originally committed. Since the count relies heavily on volunteers within the community there are not many resources to replace the organizations that dropped out.
- Region Two: The 80% decrease from 2014 brings the region back to the "normal" level of unsheltered homeless usually counted in the PIT. Last year's unsheltered count was extraordinarily high due to a trailer court in one community experiencing an environmental crisis during the 2014 count. At the time of last year's count over 90 people were counted as unsheltered who by this year are in housing. This number equals almost exactly the 95 less people counted this year.
- Region Three, Four and Six has small increase attributed not necessarily to more unsheltered homeless but toward better volunteer training, PIT count methods and broader community involvement and effort.
- Region Seven experienced an increase in unsheltered surveys; rising from 46 in 2014 to 81 in 2015. Local shelters confirmed that they had capacity to serve the 81 individuals on January 28, 2015, however some people chose not to access those available resources. The rise in unsheltered individuals could also be attributed in part to a record low rental vacancy rate in Ada County.

Decreases in the unsheltered population may also be due to the direct placement of homeless persons in Rapid Re-housing programs and increased VASH and SSVF vouchers for veterans and their families. Person in these programs, along with those staying with family or friends, or doubled up with other families, are not included in the PIT Count.

Precariously Housed

HUD's definition of homelessness for the PIT count does not include persons who may be staying with friends or relatives, in a hotel/motel, in a treatment facility or in jail. Persons in these circumstances are defined as precariously housed and are often characterized as being at imminent risk of becoming homeless.

Even though the count specifically targeted places that the unsheltered homeless go, there were almost twice as many precariously housed persons surveyed than unsheltered homeless during the count. In some areas of the state there are a much higher number of precariously housed persons than actual homeless persons. Service providers have commented this may be because in rural areas many of the homeless still have personal connections in the community, while in larger urban areas those personal support systems may be missing. During the cold weather of January it is likely that friends and families are probably more likely to let someone experiencing homelessness sleep on their floor or on a couch on a temporary basis.

Due to the impact to communities of those at imminent risk of becoming homeless accessing services, the data from respondents who completed the survey but were determined to be precariously housed is included in a separate table at the end of this report.

Acknowledgements

It is due to outstanding participation of the homeless services providers across the state, the tremendous effort of the PIT Committee, the regional housing coalitions, and the time and dedication of agency staff and numerous volunteers, that we are able to produce this report.

A special acknowledgement is given to the respondents whose data is contained in this report and were willing to share their personal information, experiences and life situations in order to better understand homelessness in our communities.

Financial assistance to coordinate the count and produce this report was provided in part by the Home Partnership Foundation.

PIT Count Results

On the night of January 28, 2015 the PIT Count identified 1,966 homeless men, women and children in Idaho. This represents a 6.5% overall decrease from 2014.

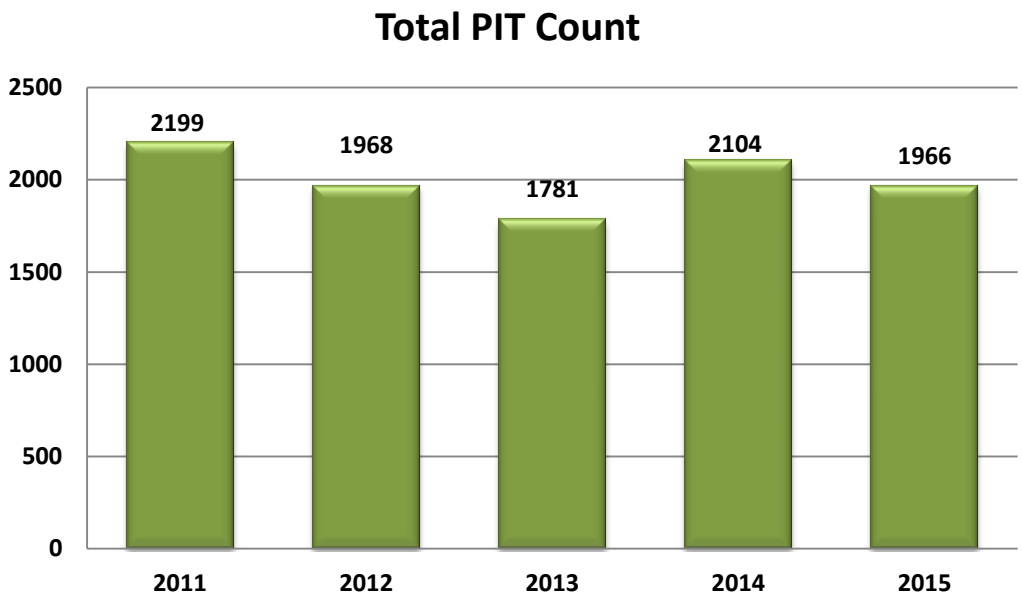

Figure 1

The unsheltered homeless account for 24% of all homeless persons in 2015 which is a marked decrease from 2014 where 30% of all homeless persons counted were unsheltered. The unsheltered population as a whole also decreased by 26% while the sheltered population increased by a modest 2%. This change in the unsheltered population may be attributed to a variety of reasons including new emergency shelters or transitional programs, additional VA housing vouchers, and increased Homelessness Prevention and Rapid Re-Housing funding. Please see the section entitled *Yearly Increases and Decreases in the Count* for additional information.

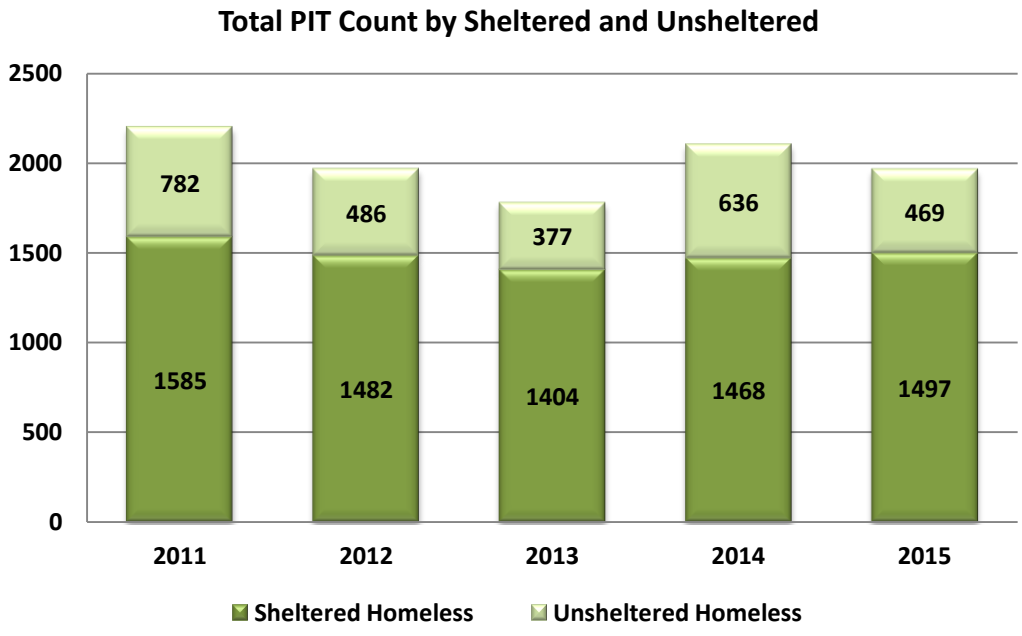

Figure 2

Households

All Adult Households and Households with Children

The PIT Count Report breaks out households into two categories: All Adult Households and Households with Children. All Adult Households consist of single individuals or households of adult members only. This includes married couples and households where all members are age 18 year or older. Households with Children are all households that have at least one minor child. This includes households of only children such as unaccompanied youth and adolescent parents and their children

All Adult Households continue to represent the majority of the homeless population in Idaho. The count of persons in both Households of All Adults and Households with Children decreased from 2014 by 5% and 9% respectively.

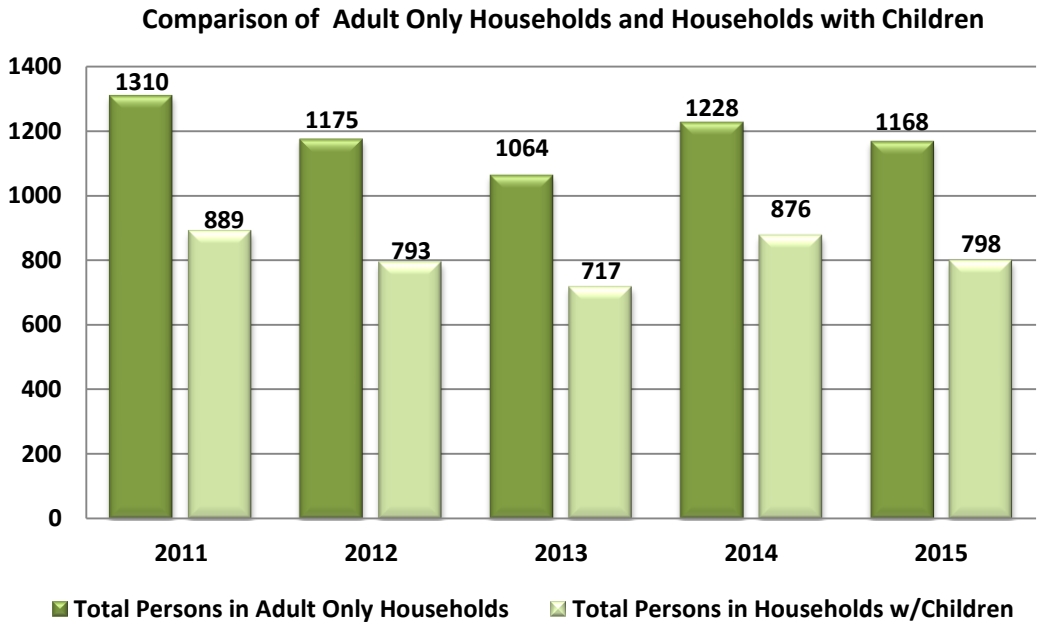

Figure 3

Within both All Adult Households and Households with Children the majority of persons are in emergency shelter or a transitional housing program rather than in an unsheltered situation.

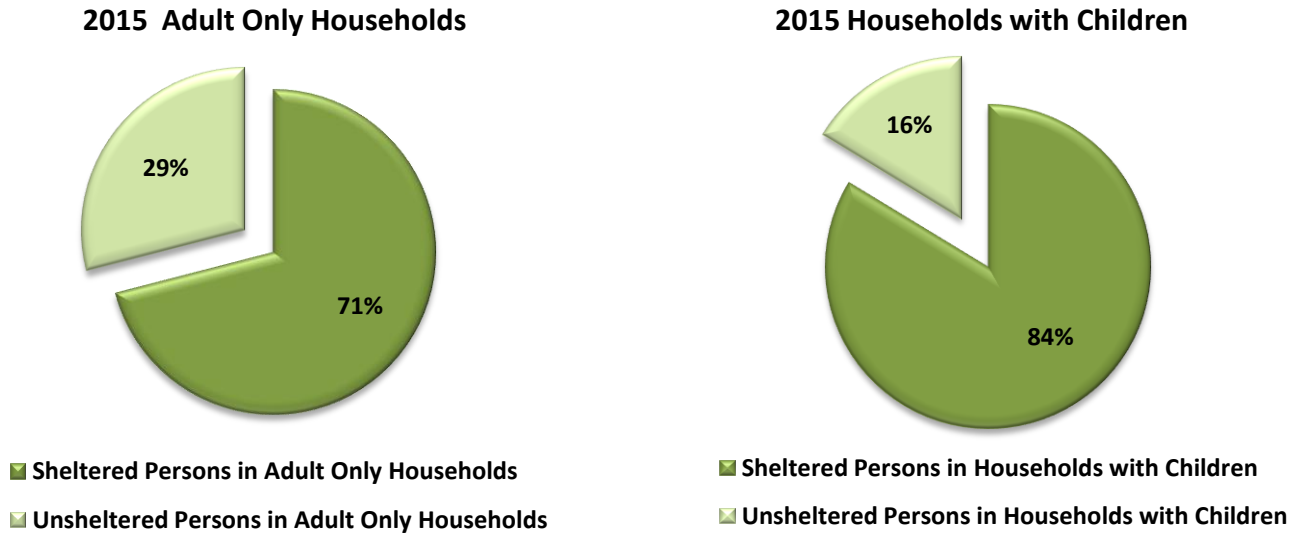

Figure 4

Households with Children

Opening Doors has set a goal of ending homelessness for families, youth, and children by 2020. In response to this goal the PIT Count places an emphasis on identifying households with children. While the PIT Count is primarily a count of persons, a count of the actual household units is also conducted since fluctuating household sizes can affect the total PIT count from year to year. Knowing the number of families, as well as the number of people in families, is vital in meeting the goals set by Opening Doors.

In 2015 there were 255 Households with Children with a total of 798 persons including 4 single child households. Compared to last year, this is a 5% decrease in the number of households and a 9% decrease in the number of persons in Households with Children. Figure 5 indicates the number of actual households and Figure 6 displays number of persons in Households with Children.

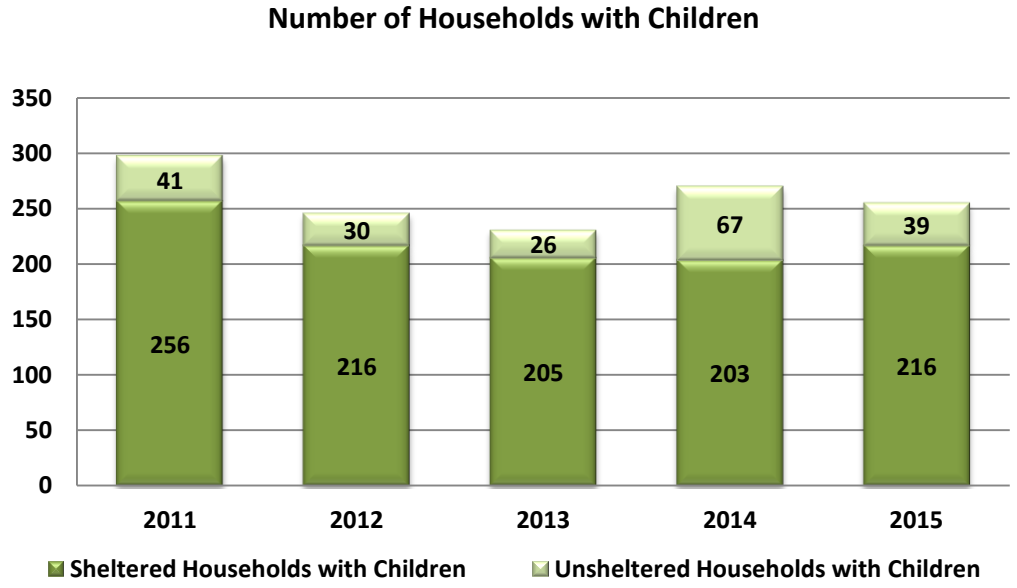

Figure 5

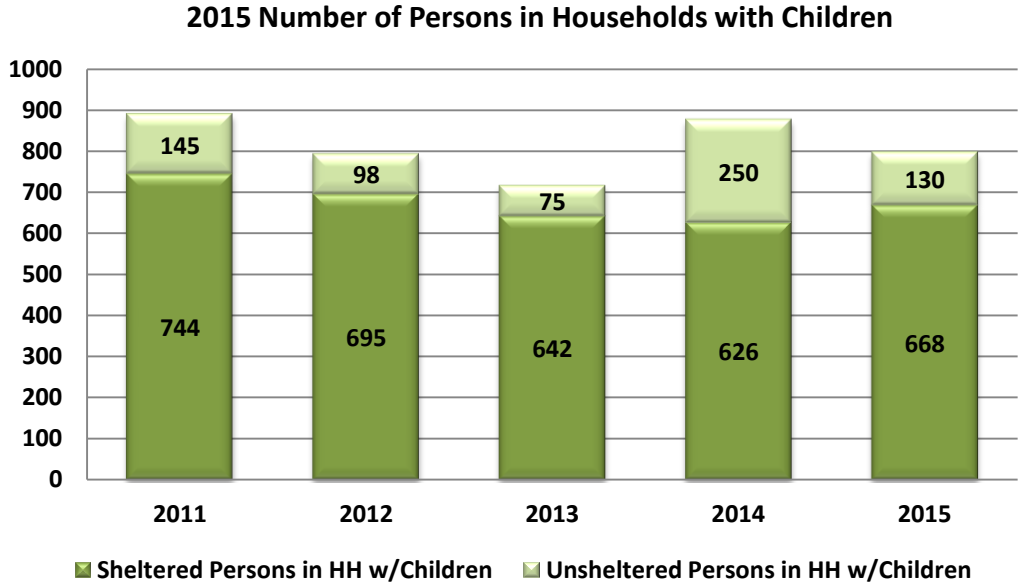

Figure 6

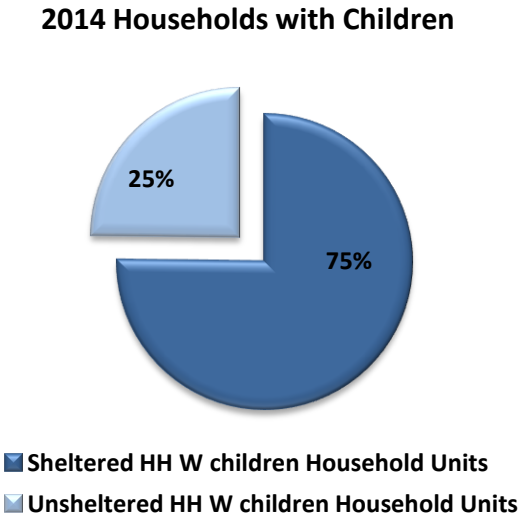
Not only did the overall number of Households with Children decrease, but there was also a substantial decrease in the percent of Households with Children living in an unsheltered situation on the night of the count. The percent of Unsheltered Households decreased 25% of the total households from 2014 to 15% in 2015 (figure 7). The number of Unsheltered Persons in Households decreased from 29% of the total of persons in households in 2014 to 16% in 2015 (Figure 8).



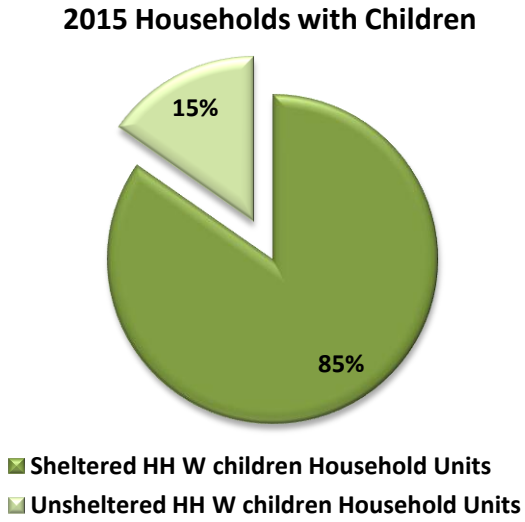


Figure 7

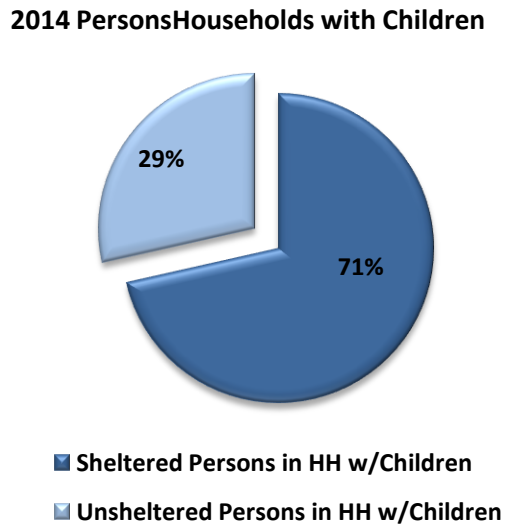

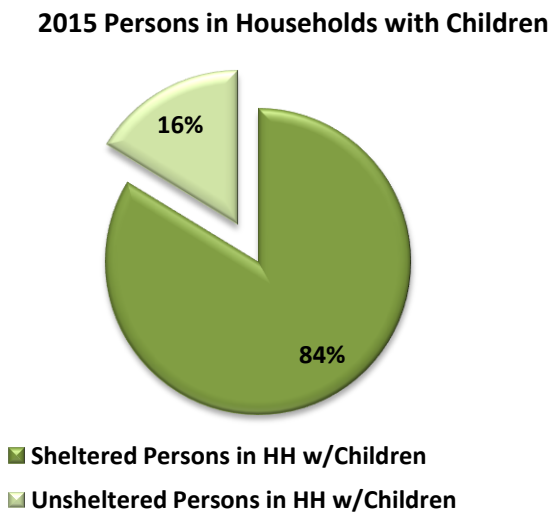

Figure 8

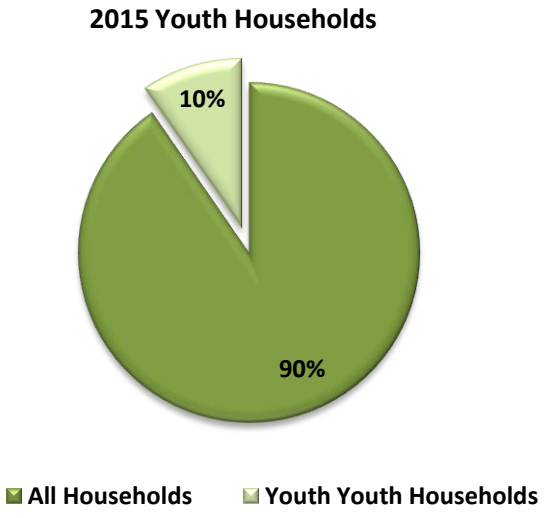
Youth Households

Youth Households are a new reporting category in our PIT Count Report. Youth are persons under the age of 25 and a Youth Household is defined as an Unaccompanied Individual under the age of 25 or Parenting Youth household where everyone in the household is under the age of 25. Youth Households account for 10% of all households in the PIT Count. The majority of Youth Households are comprised of Unaccompanied Youth.



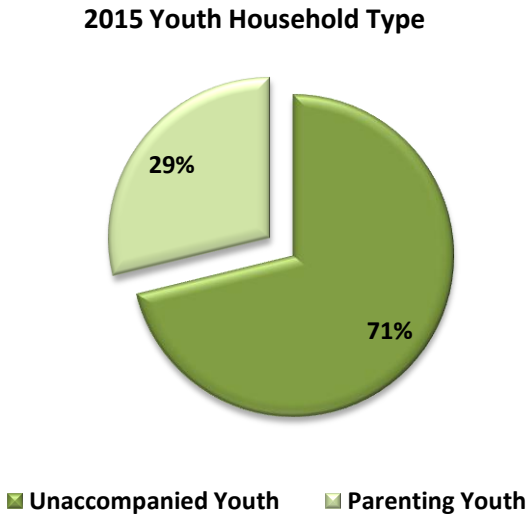


Figure 9

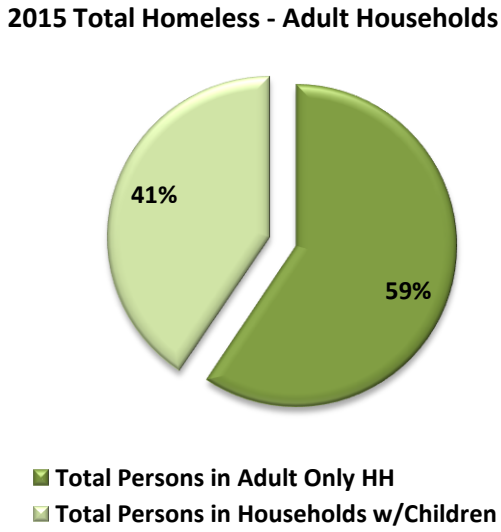
All Adult Households

In 2015 All Adult households account for 59% of the total homeless population. Within the All Adult Household category, 29% were sleeping in an unsheltered situation on the night of the count. This is a slight decrease from prior years.



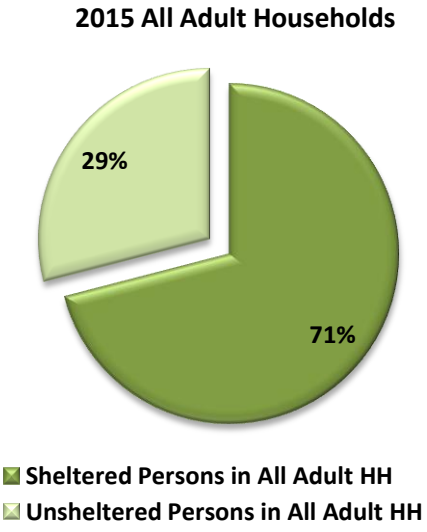


Figure 10

Chronically Homeless

A Chronically Homeless Person is defined as an unaccompanied homeless individual with a disabling condition, or a family with at least one adult member who has a disabling condition, who has either been continuously homeless for a year or more OR has had at least four episodes of homelessness in the past three years. Additionally, to be counted they must have been sleeping in a place not meant for human habitation (e.g. living on the streets) and/or in emergency shelter.

13% of the Idaho's homeless were identified as chronically homeless in 2015 which is a small increase from the 12% in 2014.

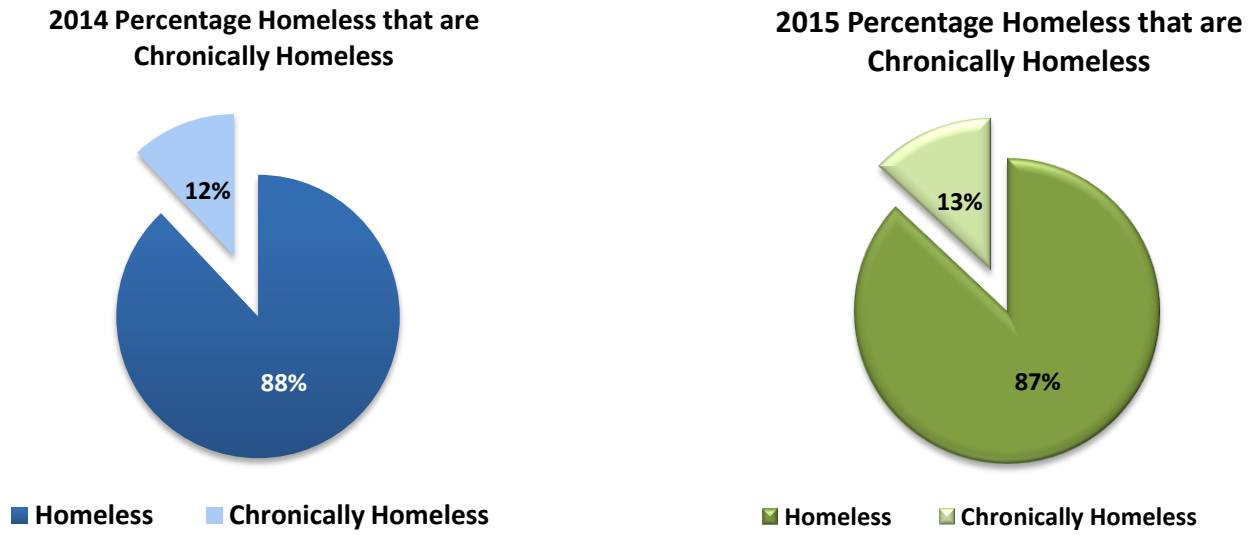

Figure 11

Within the Chronically Homeless population itself the percentage of chronically homeless families has decreased from 2014.

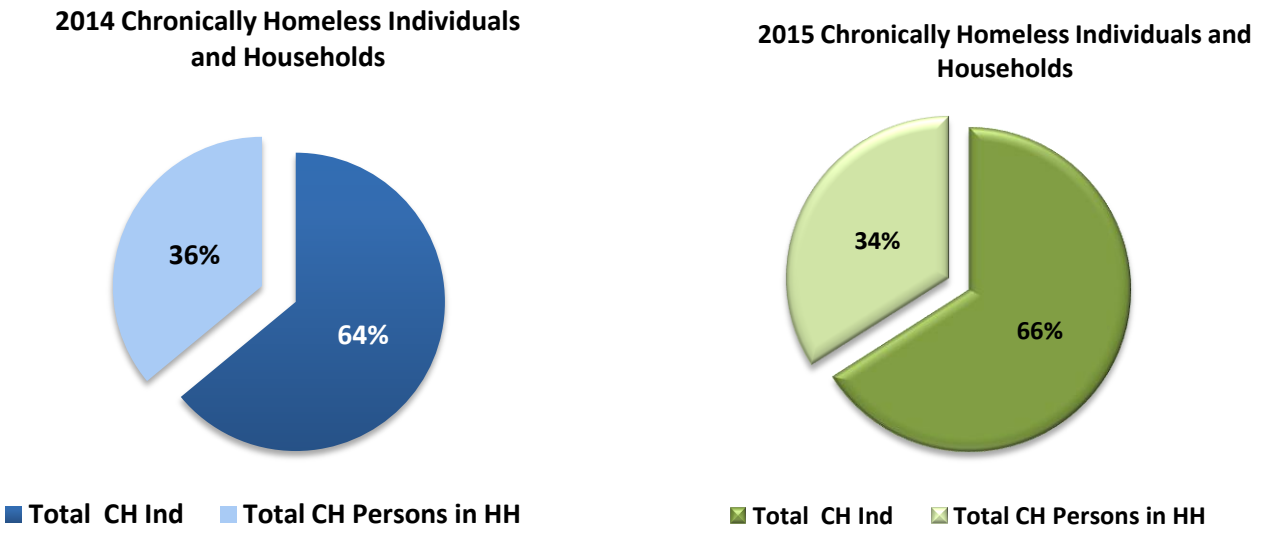

Figure 12

Veterans

The percentage of homeless veterans within the general homeless population (adults only) increased from 2014. While the number of resources targeted for homeless veterans such the Veteran Affairs Supportive Housing (VASH) and Supportive Services for Veteran Families (SSVF) are available across the state, each region has its own outreach and housing strategies for the veterans in their area. Veterans and families who are in VASH and SSVF projects are not included in the PIT Count.

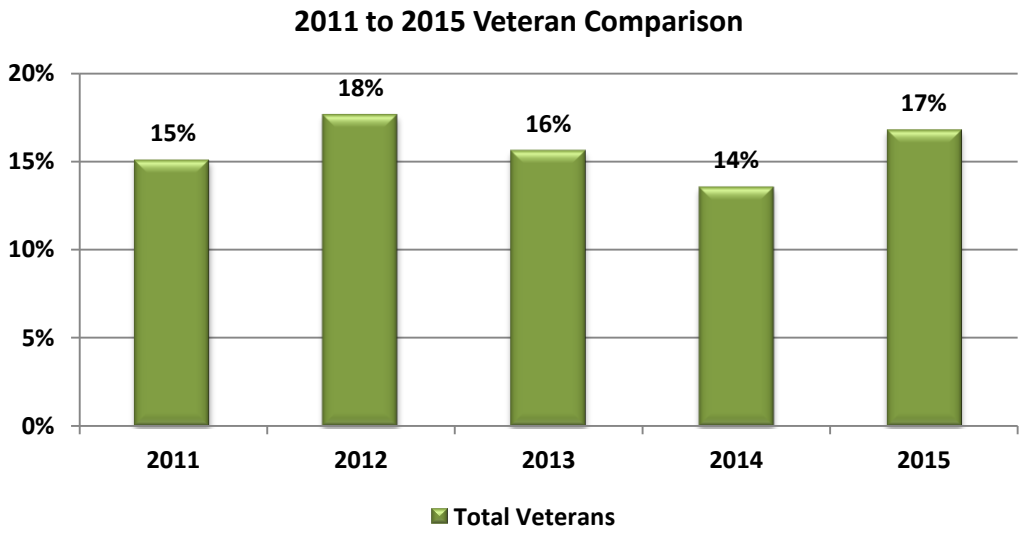

Figure 13

Within the veteran homeless population itself, the majority of veterans are in an emergency shelter or transitional housing projects rather than in unsheltered situations. There is a decrease of the percent of veterans who are unsheltered versus sheltered from 2014, which reflects the efforts of the regional programs working to help get veterans out of unsheltered living conditions and into the appropriate projects many that are tailored specifically for veterans and their families.

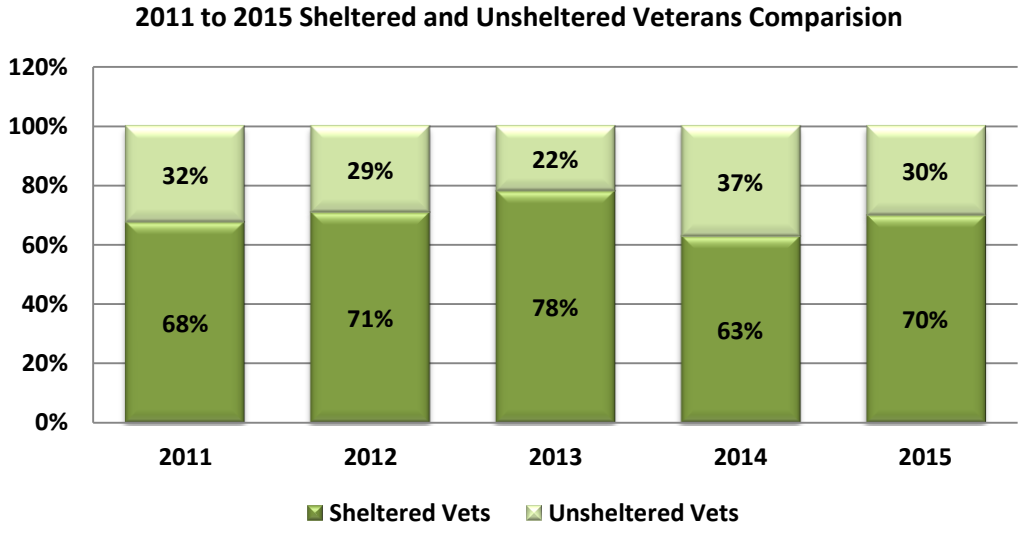

Figure 14

Subpopulations

Subpopulation counts look at specific demographics by person, by household group and by sheltered and unsheltered situations. The subpopulations reported below are for adults in both All Adult Households and Households with Children within sheltered or unsheltered situations in the 2015 enumeration.

Figure 15 reports on the percentage of sheltered homeless adults that identified as being in at least one of the subpopulations listed and Figure 16 represents the unsheltered homeless adults. Note: Adults may be counted in more than one subpopulation category.

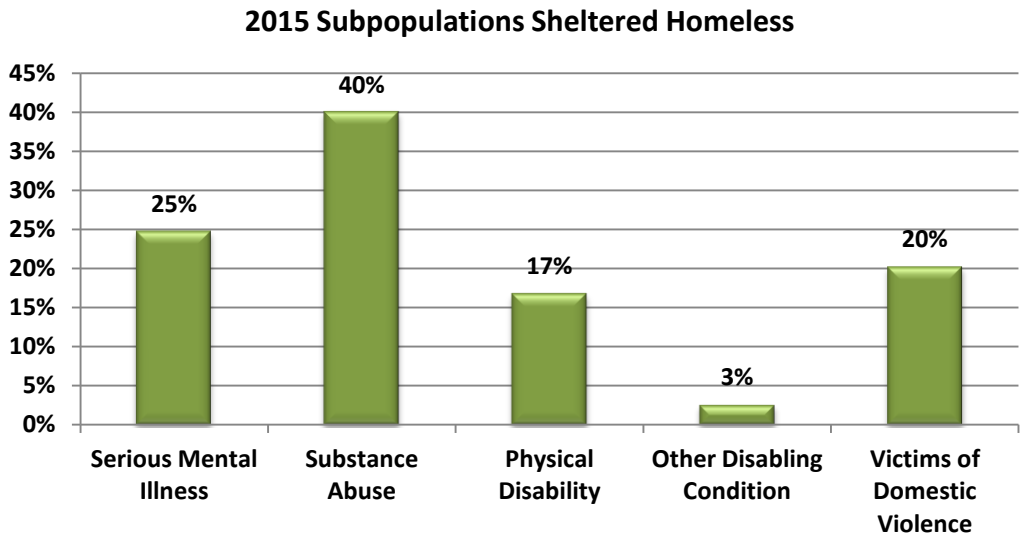

Figure 15

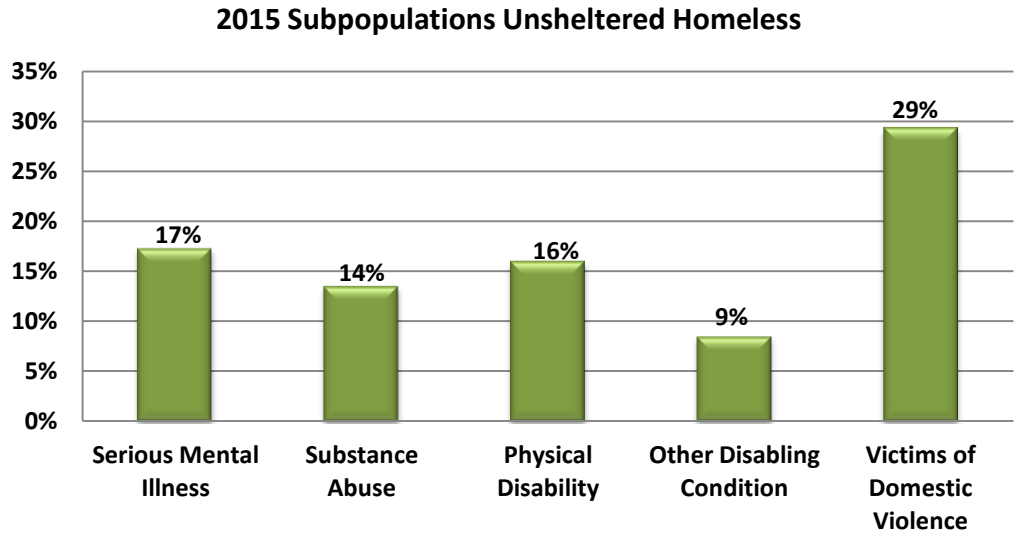

Figure 16

Unsheltered Homeless Only

Unsheltered homeless are persons who were staying on the streets, in a vehicle or other places not meant for habitation on the night of the count. Surveys collect additional information to better understand this segment of the homeless population that is not accessing available residential programs for the homeless. Data in Figures 17-20 were asked of only the Individual or Head of Household.

On the night of January 28, 2015 there a total of 353 unsheltered households with a total of 469 persons; 314 persons in All Adult Households and 130 persons in Households with Children. Figure 17 represents the percentage of unsheltered persons in All Adult Households and Households with Children.

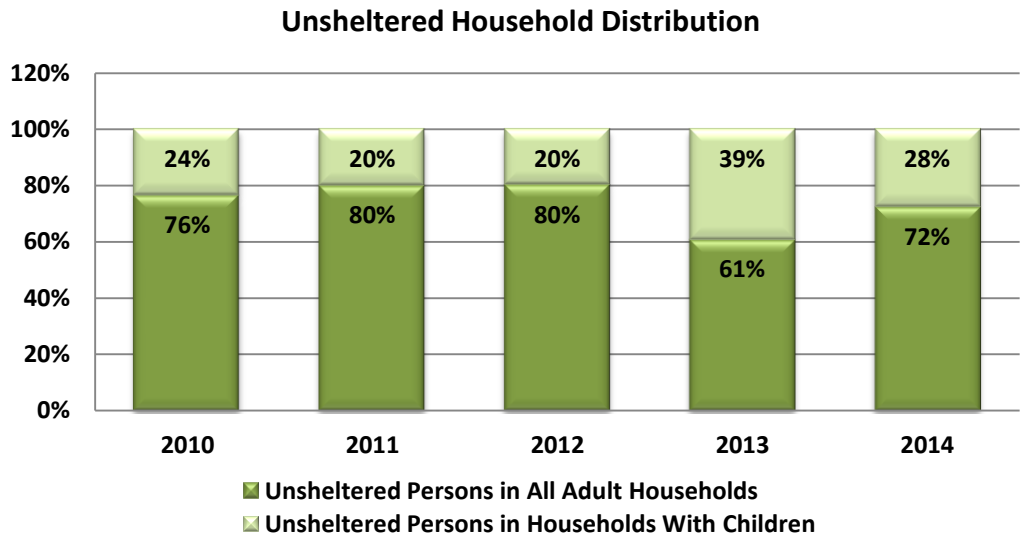

Figure 17

Living Situations & Episodes of Homelessness

Individuals and Head of Households were asked to identify where they spent the night of January 28th and how many homeless episodes they had experienced. In 2015 25% spent the night in a vehicle, 34% outside and 41% in inside non-housing. First time homeless accounted for 22%, while 42% are experiencing chronic episodes of homelessness which is a slight decrease from 2014.

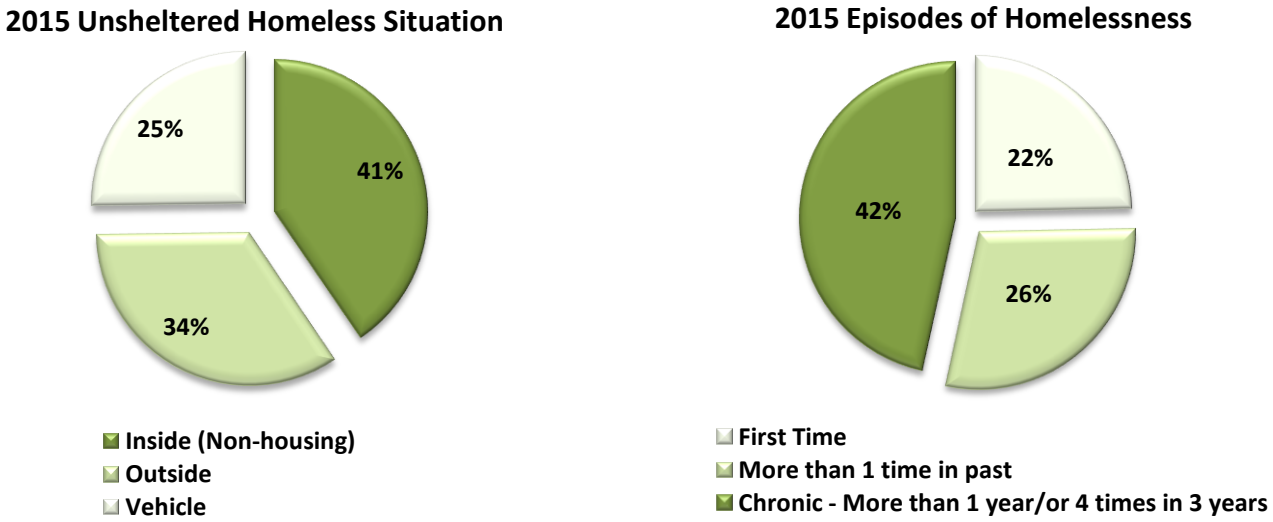

Figure 18

Length of Stay

When asked how long the individual or household had been in their current episode of homelessness 21% had been in an unsheltered situation for one week or less while 25% have been for one year of longer.

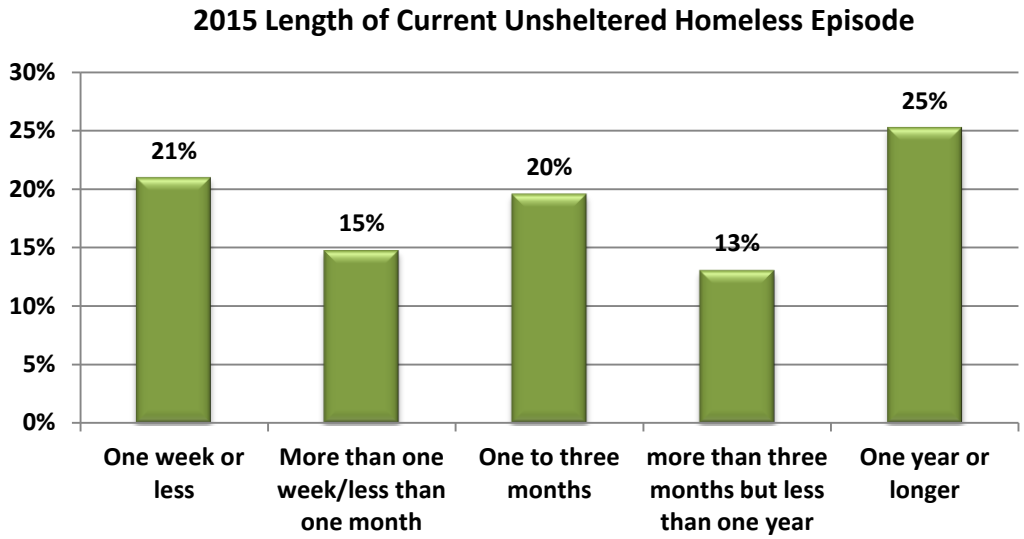

Figure 19

Reasons Cited for Homelessness and Circumstances Preventing from Becoming Housed

Individuals and heads of households were asked to identify situations that caused their homelessness. In a separate question they were then asked what circumstances were preventing them from becoming housed. Multiple responses were valid for each respondent and question.

Sheltered and Unsheltered Chronically Homeless Survey Results

Sheltered information as reported on provider survey form. Unsheltered information as reported on regional survey form. Not all surveys had responses, blank values not reported.

A Chronically Homeless Person is defined by HUD as:

- An unaccompanied homeless individual with a disabling condition, or a family with at least one adult member who has a disabling condition, who has either been continuously homeless for a year or more OR has had at least four episodes of homelessness in the past three years.

AND

- The homeless person must have been sleeping in a place not meant for human habitation (e.g. living on the streets) and/or in emergency shelter at the time of the count.
